DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted conventional art in the application (Serial # 09876032).

With respect to claim 1, the admitted conventional art shows in figures 1 and 2 an electric discharge laser or excimer laser comprising a laser housing **11**, a rotating fan **12** having a rotating shaft **13**, a bearing device **14** provided with a sensor device **14-7a**, a signal processor **21** for receiving and processing the signals delivered from the sensor device, and a control **20** separated from the bearing device except for the integration of the signal processor to the bearing device of the laser housing.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the excimer laser with the integration of the signal processor to the bearing device, since it has been held that forming in one piece an article which has formerly been formed in two pieces and put together involves only routine skill in the art. *Howard v. Detroit Stove Works*, 150 U.S. 164 (1893).

Art Unit: 2828

With respect to claim 2, the admitted conventional art discloses on page 3, lines 7-22 the signal processor **21** processes the signals at a predetermined level of sensing sensibility of the sensor device.

With respect to claim 3, the admitted conventional art shows in figure 2 a signal processor **21** including a circuit **22-2** and a gain controllable amplifier **21-4**.

Citation of The Pertinent References

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sekiguchi et al. (USPN 6366039) disclose Excimer Laser Device.
